Decreasing the Adhesion Effect of Surfaces Using Graphite Pellicle Deposition through Electric Discharges in Pulse

<https://doi.org/10.4028/www.scientific.net/amr.1036.172>

Journal: Advanced Materials Research, 2014, p. 172-177

Publisher: Trans Tech Publications, Ltd.

Authors: Pavel Topala, Vitalie Besliu, Laurentiu Marin

Abstract

The paper aims at studying the phenomenon of adhesion between the graphite pellicles deposited through electric discharges in pulse (ED) with metal surfaces subjected to processing on the one hand and on the other hand the adhesion of this pellicle with a polyurethane adhesive. Experimental research has shown that, when the surfaces are not treated, the shear occurs in the adhesive, when the test pieces are covered with graphite pellicles the shear occurs on the surface that separates the pellicle from the adhesive. It has been stated experimentally that graphite pellicles deposited through electric discharges in pulse decrease the adhesion between the mating surfaces by at least 40% compared to the not treated surfaces.

Indexul științific AD (Alper-Doger) este un sistem de clasificare și analiză bazat pe performanță științifică și pe valoarea adăugată a productivității științifice a oamenilor de știință. În plus, oferă clasamente ale instituțiilor pe baza caracteristicilor științifice ale oamenilor de știință afiliați. Indexul arată totalul și coeficienții de productivitate pe ultimii cinci ani ai oamenilor de știință pe baza scorurilor și a citărilor indexului h și i10 din Google Scholar.
